Form# 45025-01 20090224 ©2009 Hunter Fan Co.

Welcome

Your new Hunter[®] ceiling fan is an addition to your home or office that will provide comfort and performance for many years. This installation and operation manual gives you complete instructions for installing and operating your fan.

We are proud of our work. We appreciate the opportunity to supply you with the best ceiling fan available anywhere in the world.

Before installing your fan, for your records and warranty assistance, record information from the carton and Hunter nameplate label (located on the top of the fan motor housing).

Cautions and Warnings

- READ THIS ENTIRE MANUAL CAREFULLY BEFORE BEGINNING
 INSTALLATION. SAVE THESE INSTRUCTIONS.
- Use only Hunter replacement parts.
- To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.
- To avoid possible electrical shock, before installing your fan, disconnect the power by turning off the circuit breakers to the outlet box and associated wall switch location. If you cannot lock the circuit breakers in the off position, securely fasten a prominent warning device, such as a tag, to the service panel.
- All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.
- To reduce the risk of personal injury, do not bend the blade attachment system when installing, balancing, or cleaning the fan. Never insert foreign objects between rotating fan blades.
- To reduce the risk of fire, electrical shock, or motor damage, do not use a solid-state speed control with this fan. Use only Hunter speed controls.

Installer's Choice and Optional Accessories

Standard Mounting hangs from the ceiling by a downrod (included).

Angled Mounting recommended for a vaulted or angled ceiling

Understanding Mounting and Installer's Choice®

Hunter's patented 2-position mounting system provides you maximum installation flexibility and ease. You can install your Hunter fan in one of two ways, depending on ceiling height and your preference: Standard or Angled mounting. The steps in this manual include instructions for both Installer's Choice mounting methods.

Considering Optional Accessories

Consider using Hunter's optional accessories, including a wall-mounted or remote speed control. To install and use the accessories, follow the instructions included with each product. For quiet and optimum performance of your Hunter fan, use only Hunter speed controls.

For ceilings higher than 8 feet, you can purchase Hunter extension downrods. All Hunter fans use sturdy 3/4" diameter pipe to assure stability and wobble-free performance.

▲ CAUTION: To reduce the risk of personal injury, attach the fan directly to the support structure of the building according to these instructions, and use only the hardware supplied.

1 • Getting Ready

To install a ceiling fan, be sure you can do the following:

- Locate the ceiling joist or other suitable support in ceiling.
- Drill holes for and install wood screws.
- Identify and connect electrical wires.
- Lift 40 pounds.

If you need help installing the fan, your Hunter fan dealer can direct you to a licensed installer or electrician.

Gathering the Tools

You will need the following tools for installing the fan:

- Electric drill with 9/64" bit
- Standard screwdriver (magnetic tip recommended)
- Phillips-head screwdriver (magnetic tip recommended)
- Wrench or pliers
- Ladder (height dependent upon installation site)

Checking Your Fan Parts

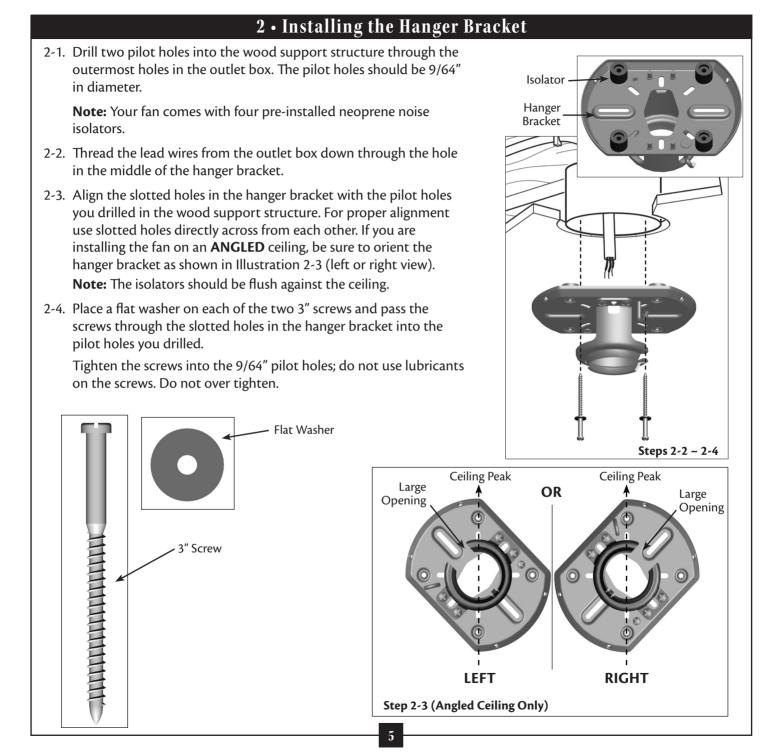

Carefully unpack your fan to avoid damage to the fan parts. Refer to the included Parts Guide. Check for any shipping damage to the motor or fan blades. If any parts are missing or damaged, contact your Hunter dealer or call Hunter Technical Support Department at 888-830-1326.

Preparing the Fan Site

Before you begin installing the fan, follow all the instructions in the pullout sheet called "Preparing the Fan Site." Proper ceiling fan location and attachment to the building structure are essential for safety, reliable operation, maximum efficiency, and energy savings.

Installing Multiple Fans?

If you are installing more than one fan, keep the fan blades and blade irons (if applicable) in sets, as they were shipped.

3 • Assembling and Hanging the Fan

0

- 3-1. To assemble fan to hang down from a flat or angled ceiling, place the canopy and canopy trim ring around the adapter so that they rest on the fan assembly.
- 3-2. Feed the wires from the fan through the downrod.
 Note: Make sure all the wires are on the same side of the metal dowel pin inside the dowrod.
- 3-3. Using the provided Allen wrench, loosen the setscrew on the adapter to install the pipe and ball assembly. **Note:** When the pipe and ball assembly is fully installed, 2-3 threads on the pipe will still be visible; this is normal. Use the Allen wrench to securely retighten the setscrew.

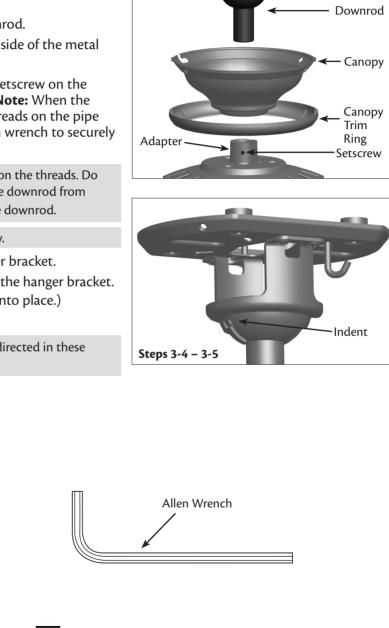

A CAUTION: The adapter has a special coating on the threads. Do not remove this coating; the coating prevents the downrod from unscrewing. Once assembled, do not remove the downrod.

A WARNING: Do not carry or lift fan by canopy.

- 3-4. Raise the fan and place the ball into the hanger bracket.
- 3-5. Align the notch on the ball with the indent in the hanger bracket. (Rotate the fan until you hear the notch pop into place.)

Go to 4 • Wiring the Fan.

A WARNING: Fan may fall if not assembled as directed in these installation instructions.

Steps 3-1 - 3-3

4 •Wiring the Fan

 (\bullet)

All wiring must be in accordance with national and local electrical codes and ANSI/NFPA 70. If you are unfamiliar with wiring, use a qualified electrician.

Wall switches are not included. Select an acceptable general-use switch in accordance with national and local electrical codes.

- 4-1. Before attempting installation, make sure the power is still off.
- 4-2. To connect the wires, hold the bare metal leads together and place a wire connector over them, then twist clockwise until tight. For all these connections use the wire connectors provided.
- 4-3. Connect the bare or green ground wire (grounded) from the ceiling to the green ground wire (grounded) from the ceiling plate and the green ground wire from the fan.
- 4-4. Connect the white wire (ungrounded) from the ceiling to the white wire (ungrounded) from the fan.
- 4-5. Connect the remaining wires as follows:

Dual Switch Wiring:

- The black wire (ungrounded) from the ceiling to the black wire (ungrounded) from the fan
- The black/white wire (ungrounded) from the fan to the wire (ungrounded) for the wall switch

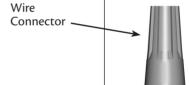

Single Switch Wiring:

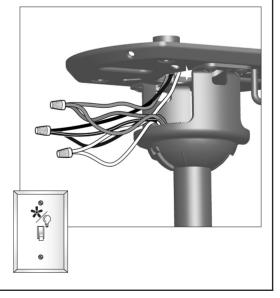

• The black wire (ungrounded) from the ceiling to the black (ungrounded) and the black/white wire (ungrounded) from the fan

A CAUTION: Be sure no bare wire or wire strands are visible after making connections.

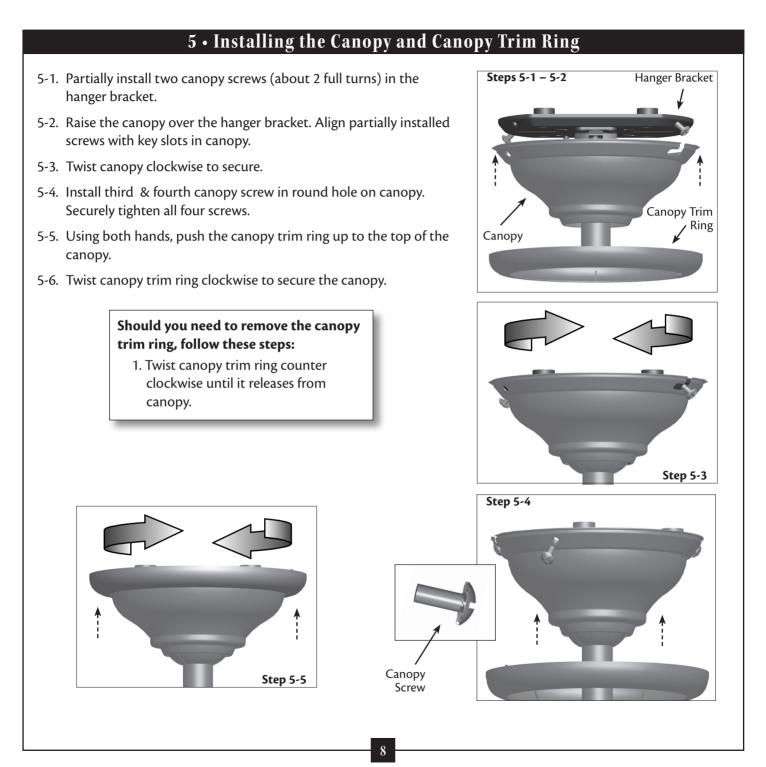

- 4-6. Turn the wire connectors upward and push them carefully back through the ceiling plate into the outlet box.
- 4-7. Spread the wires apart, with the grounded wires on one side of the outlet box and the ungrounded wires on the other side of the outlet box.

7 • Completing Your Installation With a Bowl Light Fixture

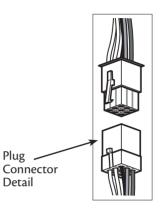

۲

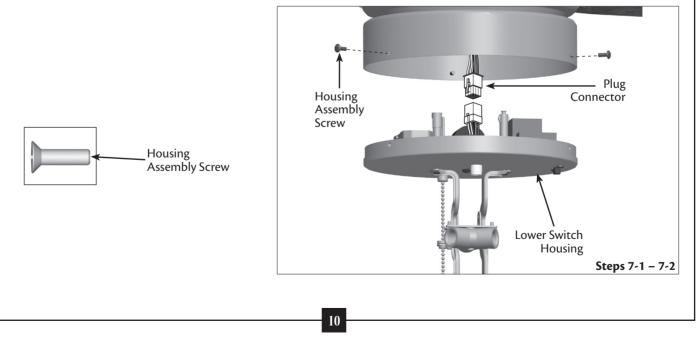

7-1. To attach the lower switch housing, connect the upper plug connector from the motor to the lower plug connector in the lower switch housing assembly.

Note: Both plug connectors are polarized and will only fit together one way. Make sure the connectors are properly aligned before connecting them. Incorrect connection could cause improper operation and damage to the product.

7-2. Place the lower switch housing assembly over the upper switch housing. Align the side screw holes in the upper and lower switch housings. Attach the lower switch housing to the upper switch housing with three housing assembly screws.

Note: In compliance with US federal energy regulations, this ceiling fan contains a device that restricts the light kit to a maximum of 190 Watts. Exceeding that limit or the marked limit on this product may result in fire hazard or improper operation.

7 • Completing Your Installation With a Bowl Light Fixture

Installing the Glass Bowl

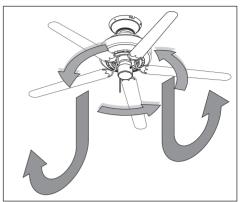

- 7-3. First install B10 candelabra bulbs (40 Watt Maximum) into the sockets.
- 7-4. Thread the pull chains through the holes in the metal disc. Then, thread the pull chains through the hole in the center of the glass bowl.
- 7-5. Thread the pull chains through the grommet holes on the sides of the cover plate.
- 7-6. Place the cover plate up against the glass bowl. Align the holes in the cover plate with the holes in the metal disc.
- 7-7. Pull down on each pull chain to make sure they move easily. If you feel any resistance when you pull the chains down, rotate the cover plate to realign the holes in the cover plate with the holes in the metal disc. Make sure both pull chains move down freely and make a clicking noise in the switch housing.
- 7-8. Screw the finial onto the threaded rod end until tight.
- 7-9. Attach the extra pull chains (included) to the fan pull chain and light pull chain using the plastic breakaway connector. (You may find the plastic breakaway connector on the end of the extra chain.)

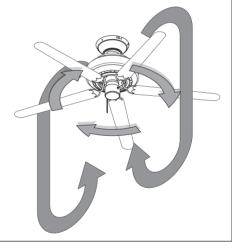

8 • Operating and Cleaning Your Ceiling Fan

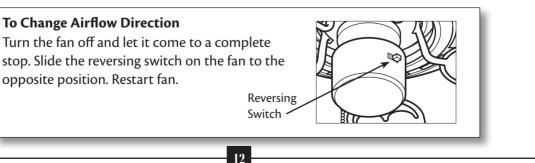

- 8-1. Turn on electrical power to the fan.
- 8-2. The fan pull chain controls power to the fan. The pull chain has four settings in sequence: High, Medium, Low and Off.
 - Pull the chain slowly to change settings.
 - Release slowly to prevent the chain from recoiling into the blades.
 - The chain uses a breakaway connector that separates if the chain is jerked. If this happens, simply reinsert the chain into the connector.
- 8-3. The light pull chain controls the power to the light fixture. The chain has two settings: ON and OFF.
- 8-4. Ceiling fans work best by blowing air downward (counterclockwise blade rotation) in warm weather to cool the room with a direct breeze. In winter, having the fan draw air upward (clockwise blade rotation) will distribute the warmer air trapped at the ceiling around the room without causing a draft.
- 8-5. For cleaning finishes, use a soft brush or lint-free cloth to prevent scratching. A vacuum cleaner brush nozzle can remove heavier dust. Remove surface smudges or accumulated dirt and dust using a mild detergent and a slightly dampened cloth. You may use an artistic agent, but never abrasive cleaning agents as they will damage the finish.
- 8-6. Clean wood finish blades with a furniture polishing cloth. Occasionally, apply a light coat of furniture polish for added protection and beauty. Clean painted and high-gloss blades in the same manner as the fan finish.

In warm weather, use downward air flow pattern

In cold weather, use upward air flow pattern

9 • Troubleshooting

Problem: Nothing happens; fan does not move.

- 1. Turn power on, replace fuse, or reset breaker.
- 2. Loosen canopy, check all connections according to the wiring the fan section.
- 3. Check the plug connection in the switch housing.
- 4. Push motor reversing switch firmly left or right to ensure that the switch is engaged.
- 5. Pull the pull chain to ensure it is on.
- 6. Remove the shipping bumpers.

Problem: Noisy operation.

- 1. Tighten the blade assembly screws and blade iron armature screws until snug.
- 2. Check to see if the blade is cracked. If so, replace all the blades.

Problem: Excessive wobbling.

- 1. If your fan wobbles when operating, use the enclosed balancing kit and instructions to balance the fan.
- 2. Tighten all blade iron screws.
- 3. Turn power off, support fan very carefully, and check that the hanger ball is properly seated.

Problem: Lights dim when turned on or do not turn on

1. Check to make sure the wattage and type of light bulbs installed match the specifications on the light socket.
